ABSTRACT

5 A telescopic drawer slide including first, second and third
drawer slides, each having a longitudinal length with a web and
arcuate arms along the longitudinal margins of the web, the
second drawer slide being nested within the arcuate arms of the
first drawer slide, and the third drawer slide being nested
10 within the arcuate arms of the second drawer slide. There is a
lock between the second drawer slide and the first drawer slide,
the lock having a biased tab rotatably coupled to the second
drawer slide and an emboss on the first drawer slide. The tab
moves into a portion of the emboss upon movement over the emboss,
15 thereby preventing the second drawer slide from closing relative
to the third drawer slide.
